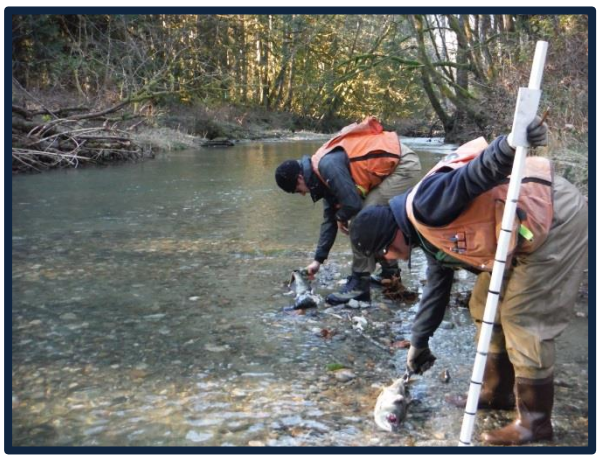
SKAGIT FISHERIES ENHANCEMENT GROUP

Spawner Survey Internship

October 2016- January 2017



Do you like working outside? The Spawner Survey Intern assists SFEG staff in monitoring salmon populations in the Skagit and Samish Watersheds. The intern performs data collection, entry, analysis, and reporting used to document survival and ecological changes in creeks within the watersheds. This information is useful in understanding the effectiveness of major projects such as culvert removals, building cattle fencing, and/or habitat enhancement. The intern works frequently with SFEG field staff and volunteers to carry out this work.

Qualifications

Applicants should have a background and interest in **environmental science/studies, biology, monitoring, outdoor recreation, and/or salmon.** Applicant must be able to identify or must be willing to learn to identify native Pacific salmon. Must have the ability to work with volunteers and provide own vehicle for transportation (mileage to and from Mount Vernon office reimbursed at State rate). This position requires work outside in all types of weather, and applicant must be capable of walking on uneven ground. (Other gear such as waders and boots will be provided).

Time Commitment

This is a **volunteer** internship that requires a time commitment of at least **day a week from 7:00 AM to 5:00 PM Monday- Friday.** Commitment to full season is required.

Interested?
